CSEA Web Development Tasks

Time Tracking Dashboard

Brief

Your challenge is to build out this dashboard and get it looking as close to the design as possible. You can use any tools you like to help you complete the challenge. So if you've got something you'd like to practice, feel free to give it a go. If you would like to practice working with JSON data, we provide a local `data.json` file for the activities. This means you'll be able to pull the data from there instead of using the content in the `.html` file.

Your users should be able to:

- Switch between viewing Daily, Weekly, and Monthly stats.

- View the optimal layout for the site depending on their device's screen size.

- See hover states for all interactive elements on the page.

Download the starter code and go through the `README.md` file. This will provide further details about the project. The `style-guide.md` file is where you'll find colors, fonts, etc.

Challenge yourself (Optional and earns you extra points)

1. When user hovers over the the boxes, they should expand and show more info. You can add further effects and animations to highlight it even more.

2. Make a light / dark mode.

3. Make a register / login or simulate one.
